## Who Are We

**ADRILY GATES** was started in 2008 to offer quality mortise and tenon Classic Wooden English Field Gates which have been made in England for over two hundred years for driveway entrances, field entrances and many other uses. Our gates are currently custom made in three styles from four to ten feet in length using quality field gate hardware imported from England. At this time we appear to be the only company making these type of gates in the United States.

At the present time our gates are made out of Pressure Treated Lumber. We will make them in Northern White Cedar or any selected wood by special order. The Pressure Treated lumber is hand selected in standard dimensions and the Northern White Cedar is milled for us in Vermont. Either can be painted or stained! Our gates can be custom made to suit your requirements as a special order. Please call for quote.

The hardware that ADRILY Gates uses has remained unchanged in England for over one hundred years. It is a heavy duty galvanized steel and is also available in a black powdered paint over galvanized. The hinges wrap around the gate and are adjustable allowing for movement in the ground as a result of say ground frost. We utilize specific hardware for specific applications.

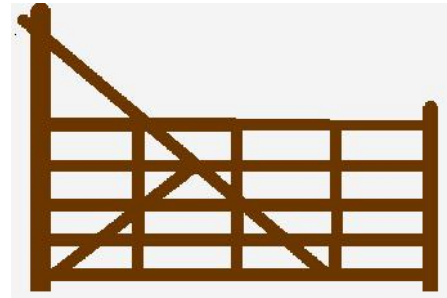

## The Three Styles

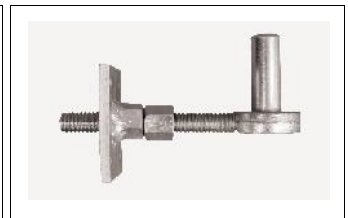

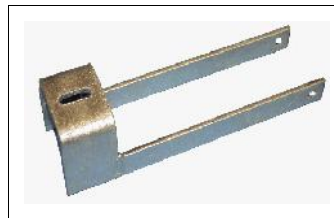

**Sandwich**

**Tamworth**

**Tufton**

- All our Gates can be hung as right or left handed
- They are attractive in style
- Only the finest materials are used
- The joints are mortise and tenoned for strength
- The cross braces are bolted using galvanized bolts
- Customizable lengths from 4 to 10 feet
- The height of gates is 4 feet except for the Tufton
- Pressure Treated lumber or other by special order
- Solid long lasting galvanized hardware
